# Scott VandenToorn

Senior Software Developer
Ormond Beach, FL | (616) 667-7267 | svandentoorn@gmail.com | LinkedIn | www.scottv.dev

## Professional Summary

Accomplished software developer with 7+ years of experience crafting robust full-stack web and native applications, from legacy-system modernization to AI-powered platforms on AWS. Proven track record leading application development, ascertaining user requirements, and quickly learning new technologies — including an independent, end-to-end rewrite of a ~$1M ARR application in 6 months, without AI-assisted tooling. Strong communication and problem-solving skills, with the ability to translate technical concepts for non-technical audiences and mentor junior engineers. Certified AWS AI Practitioner and AWS Cloud Practitioner.

## Technical Skills

**Frontend:** Angular, React, Vue, TypeScript, JavaScript, HTML5, CSS3, Capacitor, Webpack, Vite

**Backend:** .NET 8, C#, Delphi, REST APIs, SQL, SQL Server

**Cloud & Infrastructure:** AWS, Terraform, Terragrunt, CI/CD, Jenkins, Windows Server, PowerShell, Bash, Python

**Tools & Methods:** SAFe, Agile, Jira, Git, GitLab, GitHub, Bitbucket, Unit Testing, Accessibility (WCAG, Section 508)

## Notable Projects

**VicTouch:** Independently rewrote Volgistics' flagship application — generating ~$1M in annual recurring revenue — end-to-end across the Angular frontend (from Delphi/JavaScript) and backend services, shipping a production beta in 6 months and fully replacing the legacy system within 12; built without AI-assisted coding tools. Also Volgistics' first native application, released to the App Store and Play Store via Capacitor, and continuously deployed through a from-scratch GitLab CI/CD pipeline. Partnered directly with non-technical volunteer-management experts to translate domain requirements into product decisions.

**nxtStudio:** Core infrastructure developer on an AI document-intelligence platform that analyzes government solicitations and drafts content using local (Ollama) and cloud (AWS Bedrock) LLMs. Maintain a 25-module Terraform/Terragrunt library deploying isolated environments (ECS Fargate, GPU-backed LLM servers, end-to-end TLS) to AWS GovCloud, plus a locked-down self-hosted CI runner with no inbound network access. Drove security hardening — WAF, CloudTrail, GuardDuty, Security Hub, AWS Config — cutting vulnerability findings from ~600 to single digits.

**USDA Receipt for Service:** Leading the full modernization of a federally mandated application (required under the 2014 Farm Bill) used by USDA employees nationwide, migrating legacy ASP.NET Web Forms on physical servers to an Angular SPA on AWS S3 with .NET 8 APIs on AWS Lambda.

**USDA Customer Check-in Kiosk:** Built a DMV-style check-in kiosk for USDA Farm Service Agencies, improving tracking of farmer interactions across 2,300 offices. Coordinated multiple stakeholders across a large federal organization and implemented Jenkins CI/CD pipelines for reliable deployments.

**VicNet:** Collaborated with multiple engineers and testers to build a social-media-inspired volunteer portal, extending the CI/CD pipeline and native-app approach pioneered with VicTouch to a second product line.

**Volgistics DevOps & CI/CD:** Architected Volgistics' entire CI/CD pipeline from scratch on GitLab, automating one-click deployments and substantially cutting IT workload. Built a Python utility to migrate 8,000+ legacy MantisBT issues into GitLab.

**Volgistics Help:** Converted 700+ pages of static legacy help documentation into a modern VuePress site using Selenium and Python, simplifying the markdown with custom Vue components so non-technical staff could maintain it directly.

## Professional Experience

**Senior Software Developer — TSPi** **April 2024 – Present | Remote**

***nxtStudio (April 2026 – Present)***

- Developer on nxtStudio, an AI document-intelligence platform analyzing government solicitations and generating draft content using local (Ollama) and cloud (AWS Bedrock) LLMs.
- Maintain a 25-module Terraform/Terragrunt library deploying isolated client environments to AWS GovCloud, including production for city government customers.

- Drove security hardening across all environments, cutting vulnerability findings from ~600 to single digits.

***USDA Farmers.gov (April 2024 – Present)***

- Led the full modernization of the USDA Receipt for Service application, migrating legacy ASP.NET Web Forms to an Angular SPA on AWS S3 with .NET 8 APIs on AWS Lambda.
- Developed a check-in kiosk for USDA Farm Service Agencies, improving tracking across 2,300 offices nationwide.
- Subject matter expert in accessibility, guided multiple teams in meeting Section 508 compliance.
- Recognized as the go-to Angular expert; directed multiple teams in architecture decisions and established best practices.
- Automated deployments by implementing Jenkins CI/CD pipelines.
- Mentored junior developers through code reviews, pair programming, and technical guidance.

**Freelance Web Developer — Self-Employed** **July 2023 – March 2024 | Wayland, MI**

- Founded an independent web development practice, sourcing clients and delivering production web applications end-to-end — from requirements and design through launch and delivery (e.g., Harry's Appraisals) — with full ownership of scope, timeline, and execution.
- Concurrently founded and operated a small local services business, managing all client acquisition, marketing, and day-to-day operations.

**Full Stack Developer — Volgistics, Inc. June 2019 – May 2020, December 2020 – June 2023 | Byron Center, MI**

- Independently rewrote VicTouch, Volgistics' flagship ~$1M ARR application, end-to-end (Angular frontend, backend services) — shipped a production beta in 6 months and fully replaced the legacy system within 12, without AI-assisted tooling.
- Pioneered entry into the mobile market by developing native iOS and Android applications via Capacitor, expanding product reach to the App Store and Play Store.
- Built Volgistics' CI/CD pipeline from scratch on GitLab, significantly reducing IT workload by automating "one-click" deployments.
- Automated legacy migration with Python: 8,000+ MantisBT issues to GitLab and 700+ pages of help documentation to VuePress.

**Full Stack Developer Intern — DornerWorks** **May 2020 – August 2020 | Grand Rapids, MI**

- Developed an "Angular on Rails" timesheet application DornerWorks uses to track hours for 200+ employees, reducing time spent logging hours.
- Learned core development practices from experienced engineers.

**C Programming Tutor — GVSU Tutoring Center** **January 2019 – April 2019 | Allendale, MI**

- Provided personalized tutoring sessions introducing the C programming language to first-semester students.

## Certifications

AWS Certified AI Practitioner | AWS Certified Cloud Practitioner | SAFe Practitioner | Public Trust Clearance

## Education

Grand Valley State University — Computer Engineering, 2017 – 2020
